VARIMORE

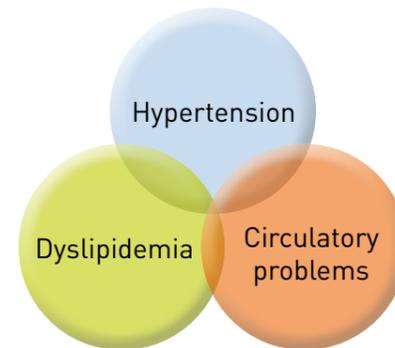

VARIMORE

Prevents thrombosis and stroke

VARIMORE is a dietary supplement that helps us combat circulatory problems (haemorrhoids, phlebitis, varicose veins, etc., as well as problems related to blood clotting), high cholesterol (dyslipidemia) and high blood pressure.

Indicated for:

- Dyslipidemia
- Improving blood circulation: venous and arterial
- Preventing atherogenesis
- Preventing cerebrovascular accidents
- Lowering high blood pressure
- Migraines
- Thrombosis

Ingredients:

Haematococcus pluvialis: is the source of **astaxanthin** that the body absorbs best. Astaxanthin is a red coloured carotenoid that is well known for its powerful antioxidant effect that improves the metabolism of cholesterol and lipids as well as the antioxidant defence mechanisms, therefore it helps to mitigate the progress of atherosclerosis. It also has beneficial effects on arterial pressure and helps to prevent cerebrovascular accidents.

Willow: white willow contains **salicin**, known for its antiplatelet effect. It is also very effective for relieving pain caused by circulatory problems and migraines.

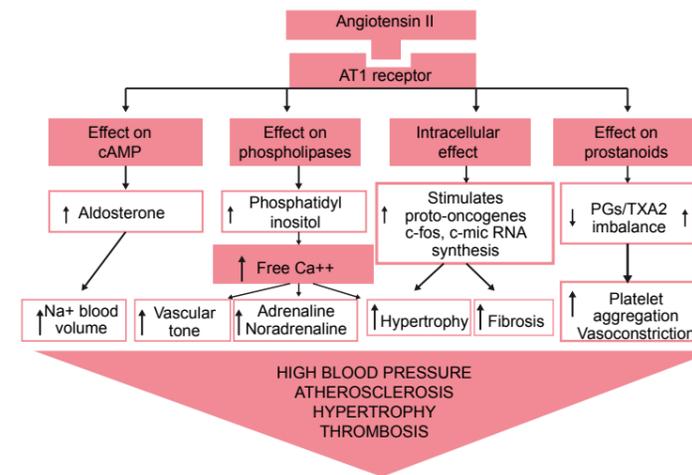

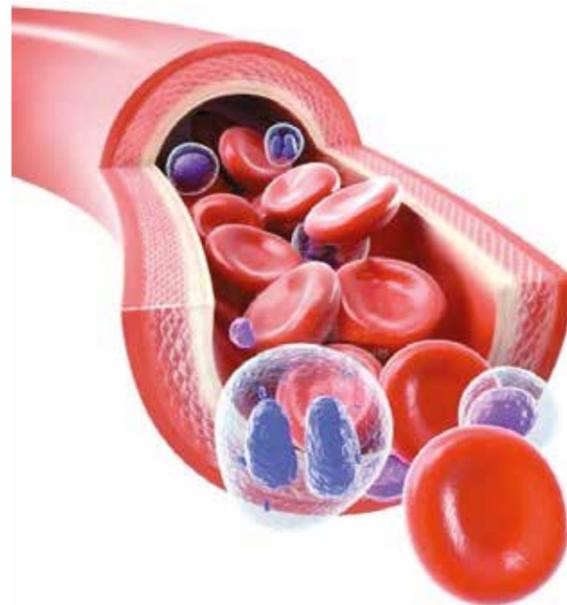

Nattokinase: is an enzyme that comes from fermented soya via the bacteria *Bacillus subtilis*, and has properties that help to dissolve clots in blood and prevent thrombi, as it has a fibrinolytic effect, therefore it helps to prevent embolisms. It can also lower arterial pressure by reducing fibrinogen in plasma and preventing an increase in angiotensin II levels in plasma. It is effective at reducing thrombotic incidents and oedemas in individuals with a high risk level due to long haul flights.

Horse chestnut: triterpene **saponins** (aescin) are one of its active ingredients that produce the anti-oedematous effect and increase capillary resistance. It is used to treat deep and superficial varicose veins and also in the treatment of chronic venous insufficiency which causes a feeling of heaviness in the legs, nocturnal cramps, itching and swelling of the legs. It is also used for haemorrhoids.

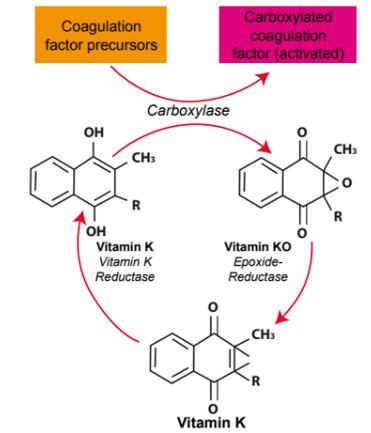

Hawthorn: it is mainly used for its cardiotoxic properties (it strengthens, delays and regulates the heartbeat). The effects it has on the cardiovascular system are believed to be due to a positive inotropic activity, the ability to increase the size of the blood vessel wall and improve the blood flow to the heart, and also because of the positive effects it has on the use of oxygen. The flavonoids contained in hawthorn are responsible for these effects. Hawthorn also has a hypolipidemic effect.

Lime blossom: its relaxing effect not only helps to treat the nervous system, but is also beneficial in the treatment of migraines and headaches, thanks to the relaxing effect it has on blood circulation. It can also be useful for treating high blood pressure, and can help to prevent arteriosclerosis.

Rutin: venotonic bioflavonoid and capillary protector. It has a beneficial effect on the collagen of the circulatory channels: it strengthens connective tissue, prevents injuries to tissue walls, prevents inflammation and protects against the release and synthesis of compounds that cause inflammation.

Renin-angiotensin II system

Ascorbic acid (vitamin C): is extremely important for the production of collagen, and helps to maintain the blood vessel walls and increases capillary impermeability, it is anti-haemorrhagic and increases the effects of rutin.

Thyamine chlorhydrate (Vitamin B₁): is a muscle tonic, relieves spasms, cramps and muscle fatigue. It also improves the activity of the cardiac muscle and the inner walls of the muscular system, including the smooth musculature of the blood vessels.

Riboflavin (Vitamin B₂): transports oxygen to the cells, therefore, it keeps tissue in good condition, including vascular tissue. It is also active in the metabolism of lipids, carbohydrates and vitamins A, B₁ and B₃.

Nicotinamide (Vitamin B₃): related to vitamin C and rutin, it is very useful in the treatment of varicose veins, haemorrhoids and headaches of vascular origin because of its antispasmodic effect, and it also prevents chilblains.

Phylloquinone (Vitamin K₁): essential for the production of prothrombin, it is involved in blood clotting and is extremely important for stopping any type of haemorrhagic syndrome.

Ingredients per 2 capsules:

Standardised nebulised extracts of:

<i>Haematococcus pluvialis</i>	266 mg (4 mg astaxantina)
Willow (<i>Salix alba</i>)	200 mg
Nattokinase	150 mg
Horse chestnut (<i>Aesculum hippocastanum</i>)	150 mg
Hawthorn (<i>Crataegus oxyacantha</i>)	150 mg
Lime blossom (<i>Tilia europaea</i>)	100 mg
Ascorbic acid (vitamin C)	80 mg (100% de *NRV)
Rutin	50 mg (100% de *NRV)
Nicotinamide (niacina, vitamin B ₃)	16 mg (100% de *NRV)
Riboflavin (vitamin B ₂)	1,4 mg (100% de *NRV)
Thyamine chlorhydrate (vitamin B ₁)	1,1 mg (100% de *NRV)
Phylloquinonea (vitamin K)	75 µg (100% de *NRV)

*NRV Nutrient Reference Value.

Presentation: 30 capsules.

Directions for use: 2 capsules a day.
